Pharmacy Announcement: Bypass Function Added for Claims for Children under Age 18 with a Diagnosis Related to a Seizure Disorder when Prescriber is a Neurologist

Effective March 20, 2017, claims submitted by a pharmacy for children under age 18 with a diagnosis related to a seizure disorder when the prescriber is listed as a neurologist or pediatric neurologist will bypass a non-preferred status. This bypass function adds to the existing capability for clinical prior authorization criteria for children to be bypassed when the prescriber is a neurologist or pediatric neurologist and a diagnosis related to a seizure disorder is transmitted on the claim.
