Nevada Medicaid Web Announcement 3122

Billing Reminder Regarding Specialty Physician Administered Drugs

Providers submitting claims to Nevada Medicaid for specialty physician administered drugs that were authorized under the new Medical Pharmacy Prior Authorization Program are reminded that only one prior authorization number may be submitted per claim. For services that have different authorization numbers, claims will need to be split billed with each prior authorization number on a separate claim.

Claims for specialty physician administered drugs without the appropriate authorization will be denied with error code 3001 (Prior authorization not found).

For additional information and a list of the specialty drugs requiring prior authorization, see the [Nevada Medicaid and Nevada Check Up Medical Pharmacy Prior Authorization Program Training](#) presentation.
